

Demco Introduces Premier Plumbing Package with Integrated Dura FastBatch™ System for Liquid Tender Trailers

Joint Press Release | FOR IMMEDIATE RELEASE

Demco® Products, a high-performance manufacturer of grain handling, sprayer, and liquid application equipment, in partnership with Dura Products LLC, a state-of-the-art manufacturer of metering, pumping, and dispensing systems, is excited to announce the launch of its new Premier Plumbing Package with Dura FastBatch™ DI Spray Fill System for DEMCO® liquid tender trailers. This fully integrated package uniquely combines the proven platform of DEMCO® liquid tender trailers with Dura FastBatch™ technology, delivering a full turnkey solution built to handle the most complex liquid applications.

As the highest-tier plumbing offering from Demco, the Premier package builds upon existing plumbing suites by bringing a higher level of automation and integration through the incorporation of Dura Products technology. This creates a high-end system that eliminates the need for most manual mixing processes traditionally required in the field.

Installed directly at the factory, the Premier package removes the need for aftermarket mixing system plumbing while providing additional exclusive features. The package is engineered as an end-to-end unit where the trailer, plumbing, power, batching, and mixing components are designed to work together seamlessly.

At the center of the Premier Plumbing Package is the integration of Dura FastBatch™ Direct Injection (DI) and Auto-Batch™ metering technology, delivering advanced mixing and batching capabilities directly within the DEMCO liquid tender package.

This integration enables operators to:

- Inject up to four chemicals simultaneously.
- Reduce fill times by up to 75%, with loads as fast as five minutes.
- Achieve precise, repeatable mixes and volumes with saved calibration presets.
- Automate flow starts and stop with $\pm 0.5\%$ accuracy, eliminating overfilling and manual guesswork.

While Dura technology powers the process, the Premier Plumbing Package, engineered by Demco, enhances the entire liquid tender system, providing additional capabilities only possible through full factory integration on a DEMCO trailer.

These Premier-tier features include:

- **Automated Tank Batch Loading with Built-In Pump Assist:** Load water directly using the DEMCO liquid tender trailer pump —no external pump required. Pump and valve controls allow precise, preset tank filling to prevent overfilling and improve load accuracy.
- **Integrated Trailer Power System with In-Field Charging:** A single onboard battery consistently powers the entire system, including mixing, metering, valves, and 12V trailer accessories. The system charges during transport, eliminating the need for separate or external charging setups.
- **Built-In Air Blowdown System for Faster Cleanout:** Clears product from all plumbed lines, including the integrated mixing system, reducing waste and improving cleanout speed while making hoses easier to handle.

The system also includes foundational DEMCO plumbing features such as:

- Plumbing from tanks to a fully integrated central fill bank.
- A John Blue pump paired with a Honda motor.
- A 65-gallon inductor cone for increased mixing capacity.

Demco and Dura Products will officially feature the Premier Plumbing Package at the **Ag PhD Field Day on July 30th**. Farmers and dealers are encouraged to attend, see the system in person, and learn more.
